

# ALEXANDER CARTER

Software Engineer | Backend & Distributed Systems

Pune, Maharashtra, India • +91 90000 12345 • alex.carter@example.com • linkedin.com/in/alexcarter • github.com/alexcarter

## PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building scalable web platforms and backend services. Strong in TypeScript, Node.js, PostgreSQL, Redis, REST APIs, cloud object storage, asynchronous processing, and distributed job systems. Experienced in designing reliable upload pipelines, document-processing workflows, and production APIs with a focus on performance, observability, and clean architecture.

## TECHNICAL SKILLS

|                     |                                                                |
|---------------------|----------------------------------------------------------------|
| Languages           | TypeScript, JavaScript, SQL, Python                            |
| Backend             | Node.js, Hono, Express, REST APIs, WebSockets                  |
| Databases           | PostgreSQL, Redis, Prisma ORM                                  |
| Cloud & Storage     | AWS, Cloudflare R2, S3-compatible storage, Docker              |
| Distributed Systems | BullMQ, Redis queues, background workers, retries, idempotency |
| Frontend            | React, Vite, HTML, CSS, Tailwind CSS                           |
| Testing & Tools     | Bun, Git, GitHub Actions, Vitest, Postman                      |

## PROFESSIONAL EXPERIENCE

### Senior Software Engineer — NovaStack Technologies

Pune, India | Jan 2024 – Present

- Designed and maintained TypeScript/Node.js backend services supporting 250K+ monthly active users.
- Built a multipart document-upload pipeline using presigned object-storage URLs, reducing backend bandwidth usage by approximately 70%.
- Introduced Redis-backed BullMQ workers for CPU- and I/O-heavy background processing, improving API responsiveness and isolating failures.
- Implemented idempotent job processing, exponential retry policies, dead-letter handling, and structured worker logging.
- Optimized PostgreSQL queries and indexes for high-volume document and activity records, cutting several slow endpoints by 40–60%.
- Collaborated with frontend and platform engineers to define API contracts, error semantics, authentication flows, and deployment practices.

### Software Engineer — BlueOrbit Labs

Mumbai, India | Jul 2022 – Dec 2023

- Developed REST APIs and internal services with Node.js, TypeScript, PostgreSQL, and Prisma.
- Built reusable authentication, authorization, validation, pagination, and file-processing modules used across multiple products.
- Added automated tests and CI checks, increasing regression coverage and shortening release verification time.
- Integrated Redis caching for frequently accessed resources and introduced request-level performance monitoring.
- Worked in an Agile team of 7 engineers, participating in architecture reviews, code reviews, sprint planning, and incident resolution.

# ALEXANDER CARTER

Selected Projects, Education & Additional Experience

## PROJECTS

### DocuMind — AI Document Search Platform

TypeScript, Hono, PostgreSQL, Prisma, Cloudflare R2, Redis, BullMQ, React

- Built a production-style RAG platform where users upload PDF, DOCX, TXT, and Markdown documents and query their contents through an AI interface.
- Designed the upload lifecycle from initialization through multipart upload completion, database state transitions, background processing, and searchable status.
- Implemented asynchronous workers to download documents, extract text, chunk content, generate embeddings, and persist vector-ready records.
- Added failure recovery using job retries, processing states, error messages, and safe re-processing semantics.
- Created a responsive React interface with upload progress, document management, processing status, and conversational search.

### EventPulse — Real-Time Event Dashboard

React, Node.js, WebSockets, PostgreSQL, Redis, Docker

- Developed a real-time dashboard consuming WebSocket events from multiple backend services.
- Used Redis for short-lived state and pub/sub-style event distribution between application instances.
- Added connection recovery, event deduplication, pagination, and role-based access controls.

## EDUCATION

### Bachelor of Technology in Computer Science & Engineering

Western Institute of Technology, Pune | 2018 – 2022

Relevant coursework: Data Structures & Algorithms, Database Systems, Operating Systems, Computer Networks, Distributed Systems, Software Engineering.

## ADDITIONAL EXPERIENCE

### Open Source Contributor

2023 – Present

- Contribute bug fixes, documentation improvements, and small features to TypeScript and backend-focused open-source projects.
- Review pull requests and write technical notes covering queues, database performance, API design, and cloud storage patterns.

## CERTIFICATIONS & TRAINING

- AWS Certified Cloud Practitioner — 2024
- Advanced TypeScript & Node.js Backend Development — 2023
- PostgreSQL Performance Fundamentals — 2023

## ACHIEVEMENTS

- Recognized with an Engineering Excellence Award for improving reliability of a high-volume document-processing service.
- Led an internal technical workshop on Redis queues, background workers, retries, and idempotent job design.
- Mentored two junior engineers on TypeScript backend development and API architecture.

## INTERESTS

Distributed systems • Backend architecture • Developer tooling • Open-source software • System performance
